SUMMARY

Senior Software Engineer with 5+ years of experience designing and scaling distributed systems and full-stack applications. Expertise in Node.js, TypeScript, React, React Native, and AWS cloud infrastructure. Proven record of architecting event-driven systems processing millions of events daily, reducing infrastructure costs by 40%+, and mentoring engineering teams. Early adopter of AI-augmented development workflows to ship faster without compromising quality or security.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, Node.js, React, React Native, Next.js, NestJS, Django
Cloud & Infrastructure: AWS (Lambda, SQS, SNS, S3, EventBridge, API Gateway, RDS), Serverless, Event-Driven Architecture, Microservices

Data & APIs: PostgreSQL, MongoDB, Prisma, TypeORM, GraphQL, REST APIs, Websockets

Tools & Practices: Git, CI/CD, Docker, Jest, Cypress, TailwindCSS, Redux, Agile/Scrum, AI-Augmented Development (Claude Code)

PROFESSIONAL EXPERIENCE

Live Summer — New York, USA

Property management software platform streamlining operations, reservations, and guest experiences for hospitality providers.

Senior Software Engineer

Jun 2025 – Present

- Lead architecture and system design decisions across the platform, setting technical direction for the engineering team
- Architected event-driven webhook system handling millions of events daily via AWS Lambda, SQS, and EventBridge
- Reduced infrastructure costs by 40%+ through optimization of serverless compute, queue throughput, and database queries
- Mentor engineers through code reviews, pair programming, and technical design discussions
- Spearheaded adoption of AI-powered development tools across the engineering team, onboarding all developers to Claude Code and driving measurable gains in delivery velocity while maintaining code quality and security standards

Software Engineer

Nov 2022 – Jun 2025

- Designed and built the Node.js backend architecture and PostgreSQL schemas using Prisma for type-safe data access
- Delivered large-scale features within tight deadlines, collaborating with product and design in agile sprints
- Established backend linting and testing practices that reduced regressions and accelerated review cycles
- Built high-volume data ingestion pipeline supporting millions of daily API requests across distributed services

RugBurn LLC — San Diego, USA

Jul 2021 – May 2022

Analytical tools for the ERC-20 blockchain network.

Software Engineer

- Managed and mentored 3 engineers, coordinating delivery across multiple concurrent web3 product launches
- Built NFT marketplace, minting contracts, and governance DApp using React on Ethereum

PROJECTS

ANHLS — NHL analytics platform querying 6M+ rows of statistical data, surfacing insights unavailable on mainstream platforms.
